Select Canada and 9 other countries. Select countries that are from different continents and that are in different HDI groupings. Do not have more than 2 in each continent and you must have at least one in each HDI grouping.

Take a look at the relationship between the HDI score and the Education, Health and GDP rankings. Comment on this relationship.

Rank the countries by each score. Do countries tend to have similar scores (if they score high on health do they score high on the rest?).

Do you think that the HDI is a useful way of evaluating the standard of living? Why?
What do you think is missing (if anything)? Why?

See if you can add that factor(s) and then rank the countries. Example you might include the countries Gini coefficient. Comment on your results. Remember you will need to weight the factors some how.

Print your results and hand them in.
